

ALLROAD S CARBON

Adaptive Layup : Strong where it matters, light everywhere else

Carbon is lighter than alloy, but weight always add up. Using the right amount of fibers where the rim is less stressed to reduce rim weight with no compromise on reliability, this gives wheels that are livelier and more enjoyable while climbing. Up to 70g saved per rim.

Improved responsiveness

The reduced inertia of the rim combined with INFINITY hub technology means instant acceleration.

Effortless Maintenance

The ID 360 Freehub system offers reliability, easy servicing, and long-term durability
