

E-CROSSTRAIL SL CARBON 29

Improved acceleration and control, lower battery consumption

Light but strong carbon rim reduces inertia Light spokes improves vertical compliance and control New Infinity hub with 28 spokes keeps lateral stiffness high

Purpose-built for off-road E-bikes

Wider 30mm (internal) rim adds stiffness and cornering precision Engineered for the added torque of E-bike motors with 28 threaded three-cross spokes that further boost lateral stiffness

Low maintenance and easy to use

Ultra-reliable and low maintenance ID360 freewheel system Userfriendly tubeless system eases tyre mounting Delivered with spare spokes.

Designed to transform your electric mountain bike into a trail rocket, the E-Crosstrail SL Carbon 29 wheels rely on a dynamic design and exceptional strength to deliver a unique riding experience, while reducing battery consumption. Magic from Mavic.

Thanks to lightweight carbon rims that make no concessions to strength, the E-Crosstrail SL Carbon 29 considerably reduce inertia for better acceleration and increased control. The steel spokes, designed by our teams at the foot of the French Alps, are also lighter, improving vertical compliance and control for greater confidence on uneven terrain. Finally, the new Infinity hub with 28 steel spokes maintains high lateral stiffness for optimal stability when cornering. You'll love dancing on the trails.

Designed to handle the high torque of e-bike motors, this robust, high-performance wheel is fitted with a wide 30mm rim (internal), which adds extra rigidity and precision when cornering, allowing you to negotiate corners with absolute confidence.

Like all Mavic wheels, the E-Crosstrail SL Carbon 29 has been designed with durability and repairability at the top of our priorities, with an ultra-reliable ID360 freewheel and tubeless system for easy tire mounting, all to save time and energy when servicing your wheels. For extra peace of mind, the E-Crosstrail SL Carbon 29 wheels come with two spare spokes per wheel, so you can go out and make trouble without having to start all over again in the workshop.

The E-Crosstrail SL Carbon 29 wheels are an unrivaled choice for optimizing the performance of your electric mountain bike, with dynamic handling and unflinching robustness. Science moves forward, and so do your wheels.
