

ALLROAD SL CARBON

Faster than ever on rough roads, gravel and dirt

42mm aerodynamic carbon rim 25mm wide hookless UST rims for a smooth ride with a wide range of tubeless tires from 30mm-64mm UST Road Tubeless lets you run lower tire pressure for comfort and control on rough roads

Perfect balance of lateral stiffness and vertical compliance makes the ride more dynamic

Wide carbon rim with optimized lay up is stiff while absorbing shocks and vibration

Oversize axles and bearings offers greater lateral stiffness 24 double butted spokes improve reactivity

Durable and easy to maintain

ID360 freewheel is low and easy maintenance Automatic bearing preload (QRM Auto) requires no adjustment and guarantees long-term durability Handbuilt in Europe

Discover your best ally for fast, committed gravel adventures. The aerodynamic Allroad SL Carbon wheel will propel you faster and with confidence on the roughest roads, the loosest gravel and the most uneven singletrack. Its 42mm deep carbon rims and handbuilt Mavic-quality construction offer exceptionally lightweight performance.

The Allroad SL Carbon's 25mm wide UST hookless rim ensures a smooth ride, whatever the tire you pair it with. Compatible with a wide range of tubeless tires from 30mm to 64mm, it's easy to adapt your bike to all types of surfaces. What's more, thanks to UST Road Tubeless technology, you'll be able to ease off the pressure for optimal comfort and greater control on the roughest trails.

The perfect balance between lateral stiffness and vertical forgiveness makes the Allroad SL Carbon more dynamic than ever—they love getting dirty. The wide carbon rim, with an optimized carbon layup, provides exceptional rigidity while minimizing shocks and vibrations. Oversized axles and bearings guarantee ideal lateral rigidity, for unparalleled cornering, handling and power transfer. What's more, the swaged 24 spokes improve the wheel's responsiveness while offering impeccable looks and, above all, an unrivaled riding experience.

In addition to its exceptional ride quality, the Allroad SL Carbon is built to be durable and easy to maintain. The ID360 freewheel is designed to make life easier and minimize maintenance to keep you concentrated on riding rather than on repairs, and the automatic bearing preload (QRM Auto) requires no adjustment and guarantees long-term durability.

The Allroad SL Carbon wheel is more than a piece of quality and reliable engineering. It's a statement of choice, of lifestyle, and of practicality. Everything about it will delight you, and your bike will never be the same.
