

E-CROSSRIDE 1 29 30MM

**E-bike ready : New electric toys, new challenges
=> specific solutions**

Higher torque and added weight have pushed us to rethink the optimization of our wheels to offer e bike enthusiasts performance and reliability. Adapted number and shape of spokes, optimized rim thickness (PFP - Pinch Flat Protection), and even different hub materials

ID360 : A simple, reliable yet efficient and easily serviceable freewheel system.

Dual ratchets freewheel system. Choose between 24t for less drag or 40t for quicker engagement. New seal for worry free ride, but in case it's a tool-free serviceability.

No compromise on reliability

Trying to lower the cost of a product is indeed a matter of compromise, but regarding reliability, we make no difference between our Crossrides and some fancier models. The wheels go through the same lab and field test processes.
