

## **ALLROAD S**

**Ride smoother and faster on rough roads, gravel and dirt**

**25mm wide hookless UST rims for a smooth ride with a wide range of tires from 30mm-64mm UST**

**Road Tubeless lets you run lower tire pressure for comfort and control on rough roads No tubes means less friction, better efficiency and grip, and pinch-flat protection**

**Lightweight and durable**

**Lightweight, flat spokes and ID360 freewheel technology for reliable lightweight performance**

**Automatic bearing preload (QRM Auto) requires no adjustment and guarantees long-term**

**durability Fore drilling doesn't require the use of rim tape - 30g and a lot of hassle saved per wheel**

**Laterally stiff and vertically compliant for a dynamic ride quality**

**Fore technology keeps the rim upper bridge solid to make the rim stiffer Oversize axles and**

**bearings offers greater lateral stiffness ID360 freewheel technology is 12mm compatible,**

**convertible to quick release**

**Adventure cyclists looking to take their gravel riding to the next level will find their match with**

**Mavic's Allroad S wheels. With their cutting-edge technology and signature Mavic design, these**

**lightweight, durable wheels are ideal for tackling all types of terrain, from rough gravel roads to**

**windy singletrack, and everything in between.**

**The Allroad S wheels' 25mm wide UST hookless rims creates a smooth ride, whatever the type of**

**terrain or condition of the surface. They are compatible with a wide range of tires, from 30 to**

**64mm, so you can adapt their style to suit your personal preferences, or whatever your ride calls**

**for.**

**Robust and powerful, the Allroad S wheels are equipped with flat, lightweight spokes and ID360**

**freewheel technology, which guarantees long-lasting performance. Automatic bearing preload**

**(QRM Auto) eliminates the need for adjustment and ensures long-term durability, so you can enjoy**

**the road without worrying about maintenance. UST Road Tubeless technology allows you to drop**

**tire pressure to increase comfort and control, while reducing friction to enhance efficiency and grip.**

**It also provides protection against flats.**

**Fore drilling makes the rim completely airtight without the need for a rim tape, saving 30g per**

**wheel—the weight of an extra bar in your back pocket. You'll appreciate that 30g less per**

**revolution.**

**Lateral rigidity combines with vertical compliance, making these wheels objects of pleasure. Fore**

**technology helps with that power transmission and stability by keeping the rim's upper bridge**

**undrilled, increasing rigidity. Oversized axles and bearings also enhance lateral rigidity for even**

**greater stability and responsiveness.**

**To complete the package, ID360 Freewheel technology on Allroad S wheels is compatible with**

**12mm axles and can be converted to quick release, allowing you to easily adapt your wheels to**

**your preferences and your bike.**

**Lightweight and durable, and designed at the foot of the Alps by dedicated and meticulous**

**engineers, our Allroad S wheels will take you and your riding to the next level.**
